

BUS BAR SUPPORT INSULATORS

Meister International, a member of the National Association of Electrical Distributors, distributes the finest quality electrical insulators for both Industrial & Utility applications. Meister International distributes porcelain feed through bus support insulators used by the switchgear industry. Our porcelain feed through bus support insulators are in stock in various sizes to support different sizes of bus bar. These porcelain feed through bus support insulators have a gray glazed finish and are in stock for immediate shipment.

The cycloaliphatic epoxy bus bar support insulators distributed by Meister International are used by switchgear manufacturers, packagers, and distributors. The design of the cycloaliphatic insulators distributed by Meister International offer high mechanical ratings, both cantilever and tensile strengths. Since cycloaliphatic insulators are made with castings, they offer dimensional control and are homogeneous throughout. Cycloaliphatic insulators also offer high resistance to erosion and tracking. Meister International helps customers avoid long lead times by stocking industry standard cycloaliphatic insulators. Stocking agreements are offered so that your production process can run without interruption. We put our customers first and always work to exceed our customers' expectations.

To learn more about our Bus Bar Supports select from the options below.

Cycloaliphatic Epoxy Bus Bar Support Insulators

Cycloaliphatic Epoxy Bus Bar Support Insulators

Cycloaliphatic Epoxy bus support insulators are designed as a support insulator for bus bars in air insulated metal-clad and metal enclosed switchgear.

High compression strength and other qualities of cycloaliphatic epoxy make these feed-thru bus supports reliable for many years of service.
